Ideal Application Area Size^	m²	Min 9-20	Min 12-20	Min 12-24	Min 15-31

How do Polo Portable Air Conditioners work?

- Air from the room is drawn into the Air Conditioner, cooled by refrigeration and blown out the front grill.
- Hot air is blown outside through the exhaust hose, using supplied window kit.
- Hot air must be exhausted outside the room being cooled, or the room will not cool.

Which model is right for me?

It's important to choose what model is right for you. Individual room conditions should be considered when selecting your POLO cooler. For best performance, the cooler should be in a well insulated and sealed ground floor room with external walls facing east and/or south.

For further information call **1300 555 545** or visit **mypolo.com.au**

*Conditions apply, for full details visit brivis.com.au. ** Climate conditions where high humidity is present may require drainage.

^ Product must be operated in accordance with minimum room size requirements as detailed in the owners manual.
